Introducing...  
**Monitoring Well Packers**

With splice free read cables installed, custom built to suit clients specifications and designed for ease of monitoring flowing wells without having to worry about freeze ups & removing the packer to download logging information.

- ▶ Sizes available from 2" up to 8"
- ▶ Specialised well products designed developed and manufactured
- ▶ Contact Well Busters to discuss your requirements

**QSP Packers, LLC**  
Quality - Service - Price

**SERVING YOUR COMPLETE PACKER NEEDS**

- **Inflatable Packers:** Pressure Grout, Single or Straddle, Permeability Testing, Wireline, Environmental and Water Well
- **Mechanical Packers:** Grout, Environmental and Freeze Plug

Contact QSP with all  
your Packer questions!!

## NEW PRODUCTS

### SANECOTEC'S HUWA-SAN PEROXIDE TECHNOLOGY

Jim Shubat, president of SanEcoTec, was on hand at CanWell 2012 to present what his company hails as the new generation of hydrogen peroxide for water treatment and disinfection. The product is designed to be powerful, residual and sustainable. SanEcoTec is a company dedicated to environmental responsibility and good stewardship, values that are at the core of its technology. ### GEOSMART'S NEW PUSH'N PULL

GeoSmart introduced a compact multi loop feeder and pump puller to North American drilling industry at the CanWell conference in Hamilton, Ont., in late May.

GeoSmart Energy has recently acquired a new time-saving multi loop and pump handler designed specifically for geothermal drilling applications, but with additional applications for the water-well industry as well. Compact and powerful, the GeoSmart Push'N Pull simplifies the installation of geothermal pipes in vertical drill applications, saving time, money and manual labour. ### NEW DTH HAMMER FROM ROCKMORE

Rockmore International has released the first DTH hammer in its emerging Deep Hole series, the ROK 500DH. As a five-inch-class hammer, the 500DH is targeted to drill 140- to 152-millimetre (5.5- to six-inch) diameter holes. Designed to increase drilling effectiveness and efficiency in deep hole applications, the ROK 500DH incorporates engineering advancements for drilling in DTH applications such as geothermal, exploration, water-well, and in other mining and construction sectors. The hammer is rated for use with large compressors: 24.1 Bar (350 PSI) at 25.2 m<sup>3</sup>/min (890 SCFM), but can accept greater air volumes and pressures from larger air compressor packages. The upper and lower hammer air chambers of the 500DH have been modified accordingly in order to achieve optimum drilling efficiency. [www.rockmore-intl.com](http://www.rockmore-intl.com)

### SCHLUMBERGER WATER SERVICES LAUNCHES VMOD FLEX

Schlumberger Water Services (SWS) released of Visual MODFLOW Flex (VMOD Flex), the next generation of ground water flow, heat and contaminant transport modelling software for ground water professionals. Visual MODFLOW Flex improves modelling efficiency by integrating 3-D hydrogeologic conceptual modelling and industry standard numeric engines in a single, easy-to-use software environment.
